

# KHRISTOPH KOMPUTRACKER (914SCS975)

## The KK Device

A brand new innovative product for invisible computer monitoring has finally arrived! The Khristoph Komputracker also known as KK Device is without doubt a highly effective, completely undetectable monitoring program that no other similar device can equal. The Khristoph Komputracker is a special software program encrypted to a high quality USB memory stick that simply plugs into any Windows computer USB port.

Click to install the hidden program in under one (1) second! You simply will not believe how quick the installation is.

Once the software program has been installed, simply remove the device and walk away! The KK Device is invisible to all anti-virus scanners and will record an online / offline activity report including keystrokes, programs launched, opened windows applications, and screen shots. All recorded data shows a time and date stamp as evidence.

Khristoph Komputracker is not limited to any number of licenses which means you can install the software program to many computers that you own without restriction. Once the hidden software program has been installed to the target computer, it will remain completely invisible even to advanced computer users and will not conflict or slow down the computers normal operation.

The KK Device is capable of recording many days, even weeks of computer activity (depending on computer use) and when you are ready to review the recorded information simply re-insert the Khristoph Komputracker device into the target computer and transfer the recorded content back onto the USB memory stick to take away. The upgraded version of Khristoph Komputracker allows for the remote transfer of recorded data to your specified email address without the need to make frequent retrievals from the target computer.

Khristoph Komputracker sending data on pointed email address!!! Imagine possibly the most advanced computer monitoring program now being able to send the recorded information from the target computer (keystrokes, programs launched, opened windows applications and screen-shots) remotely to your specified email address! Easy, Fast, Powerful!

Khristoph Komputracker is a portable and very easy to use product. There are no commands or passwords to remember. Just plug it in and let the device do the hard work.

### KEY FEATURES INCLUDE:

- ❖ **Works on ALL Windows operating systems**  
Khristoph Komputracker is compatible with ANY Windows operating system including Windows 7 and 64-bit operating systems.

AFRICA  
GOODS  
AND  
GLOBAL  
ELECTRONICS

### ❖ **4GB Kingston Data Traveler USB**

This is a high quality portable Kingston Data Traveler with a 4GB storage capacity for transferring many days (even weeks depending on computer use) of online and offline computer activity.

### ❖ **Super fast installation**

Blink and you will miss the installation process! NO messing around - just plug the device in and click the install button.

### ❖ **Auto erase technology**

Khristoph Komputracker is designed to be quickly removed from the target computer without using the "safely remove hardware icon" or in situations where you may be interrupted during the installation process. Simply remove the Khristoph Komputracker device at any point and all traces are instantly erased.

### ❖ **Easy transfer and download**

Khristoph Komputracker will transfer all recorded information from the target computer back to the device without any fuss. You can then review the recorded content at your own leisure from your own computer or even from the target computer.

### ❖ **Stealth monitoring**

This is a brand new 2010 release with forward thinking technology. The Khristoph Komputracker program is invisible to ALL anti-virus.

### ❖ **Time and date stamped recordings**

All recorded content (whether that is online or offline activity) is broken down for easy understanding with colour coded viewing and accompanied with a time and date stamp as evidential proof.

### ❖ **Unlimited licenses**

Once purchased, Khristoph Komputracker is yours to use over and over with unlimited licenses.

### ❖ **Future proof design**

Discreet computer monitoring at its pinnacle. An advanced combination of hardware and software logistics which are upgradeable as we complete new versions.

### ❖ **NEW** - All recorded information can now be sent remotely to your email address!

The upgradeable option from the drop down menu above includes a powerful email feature that allows all recorded content (keystrokes, programs launched, opened windows applications and screen shots) to be silently sent to your specified email address. Easy, Fast, Powerful!

### ❖ **No specialist knowledge needed**

Designed by professionals for novices with Plug & Play ease of use. You will be using the KK straight from the box without any silly nonsense. Works immediately.
